

WHAT PHYSICIANS ARE SAYING ABOUT THE Y¹⁰

Dr. David Hour, dental surgeon for +30 years, specializing in cosmetic dentistry.

A recent study shows that 76% of our patients want to have whiter teeth, and we all measure the social impact of a sparkling smile.

Faced with this demand, I have tried numerous teeth whitening methods in the past few years, as you have undoubtedly. Unfortunately, the vast majority of these treatments are faced with the undesirable effects of hydrogen peroxide at high concentration, or the dissatisfaction with the results obtained with a low concentration peroxide, as per the limits authorized by European regulations today.

That is why, for a few months now, I have been using a novel method called BrightTonix Y¹⁰, which is based on the emission of a low-power radio frequency (RF), diffused through a tray filled with a harm-free and refreshing toothpaste, and placed in the mouth for only 20 to 30 minutes.

In just 2 or 3 sessions, a few days apart, the results obtained are excellent.

To further the results, you can spread a thin layer of 6% peroxide on your teeth before placing the toothpaste filled tray, to get even better results from the first session.

At the end of a BrightTonix Y¹⁰ session, only a few seconds are needed to release the patient, making this one of the easiest, safest and fastest teeth whitening treatments in the market.

“

...try a session and see for yourself why this treatment is poised to become the new standard in teeth whitening and mouth rejuvenation around the world.

There are literally hundreds of teeth whitening treatments to choose from, but none are as effective at easily, quickly and painlessly brightening the smile of your patients as the Y¹⁰.

I highly recommend you try a session and see for yourself why this treatment is poised to become the new standard in teeth whitening and mouth rejuvenation around the world.
