

Research is Key to Success...

A recent independent preliminary estimation of Y10 was conducted at Marburg University by Prof. Roland Frankenberger with the following conclusions:

- ✓ The cleaning effect was very good.
- ✓ The overall subjective feeling of the patients was very good.
- ✓ It was apparent that papilla volume appeared to be increased after two treatments.

Estimation of BrightTONIX Tooth Whitening / Rejuvenating System

In an independent preliminary pilot investigation, we evaluated the tooth whitening effect as well as gum rejuvenation of the above mentioned system. After 20 patients having been treated so far, our preliminary results are

1. The tooth whitening effect was moderate
2. The cleaning effect was very good
3. The overall subjective feeling of the patients was very good
4. It was apparent that papilla volume appeared to be increased after two treatments

From our point of view, this would be worth to be investigated in a clinical trial, including 3-D measurements using intraoral scanners known from restorative dentistry.

Best regards,

Prof. Dr. Roland Frankenberger
