

The Future is Here - Teeth Whitening & Oral Care Anti Aging

SAFETY & EASE OF USE

Peroxide free treatment, no dangerous toxins or abrasive materials, enamel and gums friendly, safe and non harmful for a complete mouth rejuvenation experience.

REVENUE GROWTH

Requires no set up time, no need for gums protection, less chair time (30 minutes max.) and can be applied by a dental practitioner, resulting in a higher return of investment for your practice.

PATIENTS LOVE IT

Y10 is the most innovative, easy and fastest teeth whitening treatment performed by dental professionals today.

NEXT GENERATION

Powered by Radio Frequency (RF) & a revolutionary design, the Y10 is quickly becoming the next generation of teeth whitening treatments.

What is Y10?

Y10 is a breakthrough teeth whitening and mouth rejuvenation system aimed to set a new standard in the teeth whitening and oral care industry and to revolutionize the overall patients experience and satisfaction.

How Does Y10 Work?

The Y10 system uses a revolutionary and intelligent technique, employing a low power radio-frequency (RF) current and a unique toothpaste that removes stains from the teeth enamel.

The bipolar radio frequency, generated by the Y10 utilizes a specially designed mouthpiece, combined with a one of a kind toothpaste to pass an RF current through a defined volume and generate an electro-chemical reaction that changes the structure of stains on the tooth. Y10's innovative toothpaste contains Hyaluronic Acid that rejuvenates the oral cavity and refreshes the teeth.

The Benefits of Using Y10

Y10 is Faster: Employs a low power radiofrequency (RF) technology to remove stains from teeth enamel and rejuvenates the oral cavity in a relatively short period of time.

Y10 is Safer: Research and current surveys taken by patients show that current teeth whitening methods may cause many undesirable side effects such as:

- Pain and sensitivity
- Tooth surface roughening and softening
- Increased potential for demineralization
- Increased risk of tooth fracture
- Degradation of dental restorations
- Unacceptable color change of dental restorations

Y10 Eliminates these risks while creating a rejuvenation effect without any pain or damage to the oral cavity and without using any harmful materials.

Y10 is Brighter: Y10 can effectively whiten any teeth shade while successfully creating an anti aging effect to the teeth and gums, creating a brighter smile.

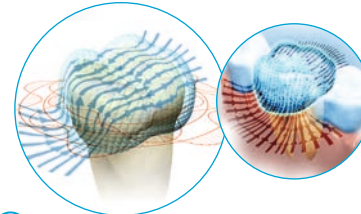

Y10 Technology

Unveiling the Future of Teeth Whitening

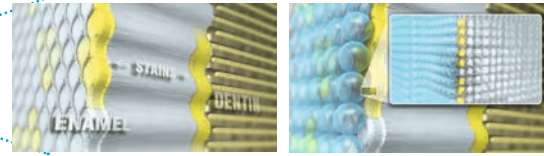

1 Y10 Toothpaste covers the teeth inside the Y10 mouthpiece.

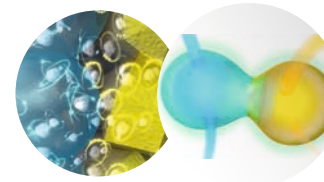

2 Electro-magnetic field generated by the RF current surrounds the tooth inside the Y10 mouthpiece and activates the Y10 toothpaste.

3 Y10 toothpaste molecules surround the tooth while interacting with the stains located on the enamel and on the dentin.

4 Y10 toothpaste molecules, activated by the RF Current, continue their back and forth interaction with the stains.

5 An interface is formed between the two components.

6 Electro-chemical changes occur in the chromophore of the stain.

7 The stain is no longer visible.

Y10 Ingredients

BrightTonix toothpaste ingredients include: Hyaluronic Acid-clinically **proven as beneficial for anti-aging of the oral cavity**, Potassium Nitrate-**efficient in reducing discomfort of sensitive teeth** and Sodium Fluoride-**highly beneficial to creating stronger teeth**.

About Us

BrightTonix is a medical device company led by industry veterans from the aesthetic field, experienced scientists, engineers and supported by leading dental professionals. The company is committed to revolutionize the teeth whitening process and to set a new standard in the Oral care industry for dental professional and patients worldwide.

The Future is Brighter, the Future is
