

BrightTonix

FREQUENTLY  
ASKED  
QUESTIONS

1. What is Y10 and how is it different from other teeth whitening solutions?  
Y10 is a breakthrough teeth whitening and mouth rejuvenation system, developed by BrightTonix. The Y10 system generates a low power radio-frequency (RF) current combined with a unique toothpaste that removes stains. While current whitening solutions, based on oxidizing methods (such as Peroxide), cause pain and burning sensations during and post procedure, the BrightTonix Y10 provides great whitening results without using any harmful ingredients. BrightTonix Y10 also provides an anti-aging rejuvenation effect to the oral cavity. Coupled with a pleasant, safe, pain-free experience, the unique technology also allows to perform the treatment frequently.
2. What is the Y10 technology?  
Y10's revolutionary technique employs a low power radio-frequency (RF) current combined with a unique toothpaste. The radio frequency, generated by the Y10, utilizes a specially designed mouthpiece, combined with a one of a kind toothpaste to pass an RF current through a defined volume and generate an electro-chemical reaction that whitens the tooth.
3. What ingredients does the Y10 toothpaste contain and what are its advantages?  
Y10's innovative toothpaste ingredients include: Hyaluronic Acid-clinically proven as beneficial for oral cavity anti-aging, Potassium Nitrate- efficient in reducing discomfort of sensitive teeth and Sodium Fluoride- highly beneficial to creating stronger teeth.
4. What is Y10 treatment duration?  
The recommended treatment duration is up to 30 minutes, depending on the treatment pre-set you will determine according to the patient's condition.
5. What is the preparation needed prior to the treatment?  
There is no need for preparation or downtime prior to the Y10 treatment. In addition, there is no need for gums protection and the Y10 can be applied by a dental practitioner, resulting in a higher return of investment for your practice.
6. How long will the Y10 treatment results last?  
The Y10's whitening effects may last 6 months, minimum. This may vary from person to person, depending on lifestyle behaviour, food or beverage consumption.
7. Are there any side effects using Y10?  
There are no known side effects caused by the Y10 treatment as it does not contain any oxidizing or abrasive ingredients.
8. How often can I use the Y10 to whiten my patients teeth?  
Since the Y10 is safe and does not use any abrasive ingredients such as Peroxide, there is no time limitation on the period between the treatment sessions.
9. Is there a recommended treatment protocol?  
There are several recommended treatment protocols for dentists, depending on the patient's condition. You can view the Y10 protocols by contacting the BrightTonix team at: [info@btonix.com](mailto:info@btonix.com).
